Installation:

Usage: `sudo ./install.sh [OPTIONS...]`

```
1   -t, --theme     theme variant(s)         [tela|vimix|stylish|
       whitesur]        (default is tela)
2   -i, --icon      icon variant(s)          [color|white|whitesur]
                     (default is color)
3   -s, --screen    screen display variant(s) [1080p|2k|4k|ultrawide|
       ultrawide2k] (default is 1080p)
4   -r, --remove    Remove theme             [tela|vimix|stylish|
       whitesur]        (must add theme name option, default is tela)
5
6   -b, --boot      install theme into '/boot/grub' or '/boot/grub2'
7   -g, --generate  do not install but generate theme into chosen
       directory       (must add your directory)
8
9   -h, --help      Show this help
```

If no options are used, a user interface `dialog` *will show up instead*

Examples:

- Install Tela theme on 2k display device:

```
1   sudo ./install.sh -t tela -s 2k
```

- Install Tela theme into /boot/grub/themes:

```
1   sudo ./install.sh -b -t tela
```

- Uninstall Tela theme:

```
1   sudo ./install.sh -r -t tela
```

Issues / tweaks:

Correcting display resolution:

- On the grub screen, press `c` to enter the command line
- Enter `vbeinfo` or `videoinfo` to check available resolutions
- Open `/etc/`**`default`**`/grub`, and edit `GRUB_GFXMODE=[height]x[width]x32` to match your resolution
- Finally, run `grub-mkconfig -o /boot/grub/grub.cfg` to update your grub config

Setting a custom background:

- Make sure you have `imagemagick` installed, or at least something that provides `convert`
- Find the resolution of your display, and make sure your background matches the resolution

  - 1920x1080 » 1080p
  - 2560x1080 » ultrawide
  - 2560x1440 » 2k
  - 3440x1440 » ultrawide2k
  - 3840x2160 » 4k

- Place your custom background inside the root of the project, and name it `background.jpg`
- Run the installer like normal, but with -s `[YOUR_RESOLUTION]` and -t `[THEME]` and -i `[ICON ]`

  - Make sure to replace `[YOUR_RESOLUTION]` with your resolution and `[THEME]` with the theme

Contributing:

- If you made changes to icons, or added a new one:

  - Delete the existing icon, if there is one
  - Run `cd assets`; `./render-all.sh`

- Create a pull request from your branch or fork
- If any issues occur, report then to the issue page
